

Procedure

CCHMC Trauma Service Procedure	<i>Procedure Number</i>	TR-02
Trauma OR Resuscitation	<i>Effective Date</i>	05/2015
	<i>Page</i>	1 of 3

1.0 SCOPE

- 1.1. This procedure outlines the criteria and procedure for seriously injured children to be directly admitted to the Operating Room (OR) for surgical management and pertains to all Cincinnati Children's personnel who participate in the care of the seriously injured child.
- 1.2. It is generally recognized that a seriously injured child in need of a Trauma OR Resuscitation during off shifts and weekends requires additional personnel to support the resuscitation.
- 1.3. The Trauma OR Resuscitation team is comprised of an inner core group of health professionals who provide direct patient care and an outer core which support the resuscitative efforts.
- 1.4. Trauma OR Resuscitation members function within this role until they can be replaced by appropriate OR personnel. Additional OR personnel are mobilized by the Manager of Patient Services or by the OR Manager on call.

2.0 DEFINITIONS

- 2.1. **StatLine:** Communication center within the Emergency Department (ED) that receives calls from outside agencies
- 2.2. **Inner Core:** Group of 10 team members (Surgeons, Nurses, Anesthesiologists, Respiratory Therapist) that provide direct patient care
- 2.3. **Outer Core:** X-ray Technician, Family Support / Chaplain, Security, Radiologist, Paramedic, PCA

3.0 PROCEDURES

- 3.1. Activation Criteria:
 - 3.1.1. Child in full arrest with pre-hospital signs of life following a non-cranial penetrating chest or abdominal injury
 - 3.1.2. Child with a penetrating injury and shock unresponsive to 40 mL/kg fluid administration
 - 3.1.3. Patient transferred from an outside hospital (OSH) with an operative head bleed diagnosed by CT and reviewed by the neurosurgeon from CCHMC
 - 3.1.4. At the discretion of the ED and surgical attending
- 3.2. Procedure for Activation:
 - 3.2.1. StatLine receives notification from an outside hospital (OSH) or pre-hospital personnel. Prior authorization from the Emergency Department Attending Physician occurs before the Trauma OR Resuscitation page is initiated.
 - 3.2.2. The ED Attending Physician collaborates with the Surgical Attending/Fellow to determine whether the patient meets the criteria for a Trauma OR Resuscitation (notification outlined in 3.5 below).
 - 3.2.3. In the situation that a Neurosurgery Attending has determined that a child requires an emergency craniotomy and a Trauma OR resuscitation is needed, the Neurosurgeon contacts the ED Attending Physician and requests activation of Trauma OR resuscitation.
 - 3.2.3.1.1 The ED Attending Physician should be contacted by calling Statline at 636-1111, option #2
 - 3.2.4. The ED Attending Physician notifies StatLine to request the activation of a Trauma OR Resuscitation. Required information includes:
 - Patient name (If known)
 - Gender
 - Injury
 - Mode of arrival
 - Estimated Time of Arrival (ETA)
- 3.3. Registration:
 - 3.3.1. StatLine begins the quick registration process, which generates a state name in Epic, if the name is known and verified, actual name is used for registration.
 - 3.3.2. StatLine contacts the Emergency Service Representative (ESR) coordinator to coordinate the pending of the OR bed.
 - 3.3.3. StatLine informs Registration Resource staff that labels and bracelet need to be delivered to the OR.
 - 3.3.4. OR staff completes the registration once the patient is in the OR.
- 3.4. Timing of Page:
 - 3.4.1. Can be upgraded from any type of resuscitation if patient meets criteria.

Procedure

	<i>Page</i>	2 of 3

- 3.4.2 When possible, Trauma OR Resuscitations are paged 20 minutes before the patient's expected arrival. If less than 20 minute ETA, paging is activated immediately.
- 3.4.3 If time allows, StatLine repeats trauma pager message 10 minutes prior to patient's arrival.
- 3.4.4 If patient meets "violence guidelines" criteria, this should be included as the last notation within the content of the trauma page.
- 3.5 Team Communication:
 - 3.5.1 Emergency Department Attending physician contacts the attending Trauma Surgeon regarding the OR resuscitation.
 - 3.5.1.1. ESR will page the Surgery Attending (listed as "Attending Surgeon Main & Liberty" or "Attending Surgeon Evening" in Who's on Call?) with the call back number, followed by 911
 - 3.5.1.2. In the event that the Surgery Attending cannot be reached, or if the ETA is < 20 minutes, an OR Resuscitation can be activated at the discretion of the ED Attending.
 - 3.5.2 The Trauma Resuscitation Team responds to the OR to stabilize the trauma patient. The team members continue in their assigned roles until the OR team relieves them of their responsibility.
 - 3.5.3 Trauma core nurses should continue to assist with medication and fluid administration under the direction of the trauma attending or anesthesia attending until dismissed by either of these individuals.
- 3.6 OR Room / Equipment Availability:
 - 3.6.1. An operating room will be available for trauma 24 hours a day, seven days a week, 365 days a year.
 - 3.6.2. Between 7 a.m. and 11 p.m. Monday – Friday, the OR charge nurse identifies a room which is available for an injured patient. Operating Room #3 is most frequently designated for trauma; however, if this room is in use for another procedure, a backup room is identified.
 - 3.6.3. Between 11 p.m. and 7 a.m. Monday – Friday, Saturday, and Sunday an operating room is available for trauma at all times. In the event that the in-house surgical team is needed to staff another room, the other room does not start until the on call trauma team has been notified and is on-site.
 - 3.6.4. The trauma resuscitation carts are available in the major trauma operating room (OR room #3) and the Neurosurgical room (OR room #24) and the basic operating instruments for trauma (Trauma Liver CDS, Trauma Mayo, Trauma Lap 1, Trauma Sternal Saw, Trauma Chest Tray, Trauma Vascular Set, Trauma Retractor Tray, and Venous Section Tray) are available in the designated trauma operating room. Neurosurgical packs and orthopedic packs are also available in the appropriate rooms.
 - 3.6.5. Upon an impending emergent transfer of a child to the operating room, the OR nursing staff prepares the major trauma operating room for a laparotomy, thoracotomy, or craniotomy as directed by the trauma surgeon.
- 3.7 OR Resuscitation Procedure:
 - 3.7.1. Roles and responsibilities for the Trauma team as defined in Tr-01 are the same in the Operating Room setting, with the exception of the MD Team Leader. The Surgery Attending will perform the MD Team Leader role and collaborate with the ED Attending Physician, until there is a clear handoff to either the ED or Anesthesia Attending. All other team members will function in their assigned role until relieved by an OR team member or dismissed by the MD Team Leader.
 - 3.7.2. The trauma team will report directly to the OR with the exception of the Nursing Team Leader and PCA, who will meet the pre-hospital providers and escort them to the OR.
 - 3.7.3. Attire to be worn during a Trauma OR Resuscitation is located on a cart in or outside of assigned OR suite.
 - The attire for Trauma OR Resuscitation is listed below:
 - 3.7.3.1 Minimal protective attire for inner core OR trauma team participants is hat, mask, gowns, gloves, goggles (fluid shields).
 - 3.7.3.2 If time allows, additional protective attire for OR trauma team members at the bedside includes scrubs or a bunny suit and shoe covers in addition to the minimal OR attire listed above.
 - 3.7.4. Pre-hospital personnel delivers patient to hallway outside of designated Operating Room. It is the responsibility of Cincinnati Children's team members to transport the patient into the Operating Room suite and onto the Operating Room table.
- 3.8 PROCEDURE FOR EMERGENT BLOOD IN THE OR:
 - 3.8.1. Once a Trauma OR Resuscitation is activated, the blood bank automatically delivers 4 units of O negative blood to the OR.
 - 3.8.2. In the event that additional blood is needed, the Massive Blood Transfusion procedure (MBTP) should be initiated at the order of an attending physician.
