

Trauma Activation Criteria

Trauma Stat:

- Any penetrating injury to head, neck or trunk
 - GSW to the extremities proximal to the elbow / knee
- Respiratory difficulty as evidenced by one or more of the following:
 - Significant increase or decrease in respiratory rate
 - Significant retractions or grunting
 - Patient intubated prior to arrival
 - Unable to maintain or difficult airway
- Tachycardia and / or poor perfusion or unexplained tachycardia (no significant pain or crying as a source)
- Hypotension
- Blood given prior to the patient's arrival
- 40 mL/kg bolus given prior to arrival
- Glasgow Coma Score (GCS) ≤ 8
- GCS deterioration by 2

Normal Vital Signs Table

Age	Pulse Beats/min	Respirations Breaths/min	Avg. Systolic BP
Premature	120 – 170	40 – 70	55 – 75
0 – 3 months	100 – 150	35 – 55	65 – 85
3 – 6 months	90 – 120	30 – 45	70 – 90
6 – 12 months	90 – 120	25 – 40	80 – 100
1 – 3 years	70 – 110	20 – 30	90 – 105
3 – 6 years	65 – 110	20 – 25	95 – 110
6 – 12 years	60 – 95	14 – 22	100 – 120
12+ years	55 – 85	12 – 18	110 – 135

Behman, RE, Kliegman, RM & Jenson, HB. (2003). *Nelson Textbook of Pediatrics*. Saunders

OR Resuscitation:

- Full arrest with pre-hospital signs of life following a non-cranial, penetrating chest or abdominal injury
- Penetrating injury unresponsive to 40 mL/kg fluid administration
- Patient transferred from an outside hospital (OSH) with an operative head bleed diagnosed by CT and consultation with the neurosurgeon
- At the discretion of the ED and surgical attending

Trauma Alert:

- Evidence of abdominal injury
 - Without hemodynamic compromise
 - Distended and / or tender abdomen
 - Abdominal bruising or seatbelt mark
- GCS 9 – 13
- Spinal cord injury with neurologic deficit
- Two or more proximal long bone fractures
- Ejection from automobile
- Partial or full thickness burn of $>15\%$ TBSA
- Significant vascular injury including amputation of limb proximal to wrist or ankle
- Emergency Department discretion

Trauma Evaluation

- Motor vehicle collision
- Struck or run over by motor vehicle (pedestrian or bike)
- Fall greater than 10 feet
- Any mechanism deemed to place the patient at risk for multi-system injury
- Any patient immobilized with a backboard and/or cervical collar
- Partial or full thickness burn between 5% and 14% TBSA
- Any burn less than 5% requiring immediate pain management

*****The trauma team should be activated for any patient who meets criteria regardless of prior evaluation at an outside facility*****
